<sup>1</sup>Contribution C92-05 is from the Prince William Sound area. The Regional Information Report Series was established in 1987 to provide an information access system for all unpublished divisional reports. These reports frequently serve diverse ad hoc informational purposes or archive basic uninterrupted data. To accommodate needs for up-to-date information, reports in this series may contain preliminary data.

## **AUTHORS**

Leah Merritt is the Commercial Fisheries Monitor for the Alaska Department of Fish and Game, Division of Commercial Fisheries, Region II, Prince William Sound, P.O. Box 669, Cordova, AK 99574.

Patricia Trautman is the Data Entry Clerk for the Alaska Department of Fish and Game, Division of Commercial Fisheries, Region II, Prince William Sound, P.O. Box 669, Cordova, AK 99574.

Ellen Simpson is an Assistant Area Management Biologist for the Alaska Department of Fish and Game, Division of Commercial Fisheries, Region II, Prince William Sound, P.O. Box 669, Cordova, AK 99574.

## **ACKNOWLEDGEMENTS**

The Alaska Department of Fish and Game, Computer Services developed the Fish Ticket System (Version 8.0) used to generate the following reports. The system is written in Realia COBOL, except for the panels where SCREENIO was used. Programmers included Denny Johnson, Carmine DiCostanzo, Ann Graham and Terry Smith. Terry Smith modified the management reporting subsystem originally written by Ann Graham. The authors would like to express special appreciation to Denny Johnson and Terry Smith of Computer Services who both were available to answer questions throughout the data entering and final report generating.

## **ABSTRACT**

This report provides catch and effort statistics for the 1992 salmon and herring fisheries in the Prince William Sound Management Area. The data base is derived from fish ticket reports of salmon and herring sales and organized using a data base software package provided by the Computer Services section of the Division of Commercial Fisheries. The program's fish ticket reporting subsystem created the summary tables which were imported into Lotus 123 ver. 3.1 for final editing. Prince William Sound produced a harvest of 11,402,046 salmon in 1992. Catch by species included 41,306 chinook, 1,771,612 sockeye, 619,572 coho, 8,637,116 pink and 334,376 chum salmon.

**KEY WORDS:** Prince William Sound Management Area, herring, salmon, catch, landings, effort

## INTRODUCTION

The Prince William Sound Management Area encompasses the coastal waters and inland drainage of the northern Gulf of Alaska between Cape Suckling and Cape Fairfield (Figure 1). The area includes the Bering River, Copper River and Prince William Sound along with a total adjacent land area of approximately 38,000 square miles.

The Prince William Sound area consists of eleven management districts and 55 statistical areas which correspond to the local geography and distribution of the five species of salmon harvested by the commercial fishery (Figures 2 through 10). The management objective for all districts is the achievement of desired escapement goals for major species while also allowing for the orderly harvest of all fish surplus to spawning requirements.

Legal gear for the salmon fishery includes purse seines and both drift and set gillnets. Drift gillnet fishermen are the most numerous and are permitted to fish in the Bering River, Copper River, Coghill, Unakwik and Eshamy Districts. Set gillnet gear is legal only in the Eshamy District. Purse seine gear is legal in the Eastern, Northern, Unakwik, Coghill, Northwestern, Southwestern, Montague and Southeastern districts.

There are five hatcheries in the Prince William Sound Management Area: Solomon Gulch Hatchery in the Eastern District (Figure 3), Cannery Creek Hatchery in the Northern District (Figure 4), Wally Noerenberg Hatchery in the Coghill District (Figure 5), Main Bay Hatchery in the Eshamy District (Figure 7), and Armin F. Koernig Hatchery in the Southwestern District (Figure 8). In 1992, cost recovery harvests to defray operating costs totaled 3,349,091 salmon, mostly pink salmon.

The Prince William Sound area has five different herring fisheries. The Prince William Sound Herring Management Plan defines the herring management year as July 1 through June 30. However the herring catches presented in this report are from the 1992 calendar year. The sac roe fisheries occur in the spring and the food-and-bait fishery is in the fall. The harvest of naturally occurring herring eggs on kelp and the food and bait fishery do not require a limited entry permit; All other herring fisheries do.

## METHODS

A fish ticket is generated each time a commercial fisherman sells his or her catch in the Prince William Sound Management Area. These tickets are legal documents and are required by regulation. The Cordova office of the Alaska Department of Fish and Game receives the fish tickets from buyers and then enters them into the Fish Ticket System.

The Fish Ticket System, designed by Commercial Fisheries Computer Services, is a system which includes programs for:

- (1) entry of commercial fisheries fish ticket data,
- (2) correction of fish ticket records,
- (3) transfer of fish tickets to centralize the state database,
- (4) providing reporting data to area office and regional staff,
- (5) various utilities to help accomplish the above and to maintain the database efficiently.

Computer Services also provides an Operators Manual which describes the functions of the components of the system (ADF&G 1989).

The two main goals of the Fish Ticket System are to provide access to the fish ticket data at the Cordova office and to provide error-free transfer of data to Divisional Headquarters for inclusion in the statewide database.

Once a fish ticket reaches the Cordova office, Department staff edits, batches and keys into the computer the fish ticket information. In support of these activities, editing tables and verification reports are maintained.

## **RESULTS**

In the Prince William Sound Management Area 11,403,982 salmon were landed in 1992 (Tables 1, 2 and 3). Of the 541 drift gillnet permit holders (Commercial Fisheries Entry Commission, Juneau, personal communication), 528 or 98 percent made at least one landing in 1992. Drift gill nets landed a total of 2,535,150 salmon. Tables 4 through 48 detail the gillnet catch by district, statistical area, by period, catch date or statistical week.

Of the 30 salmon set gillnet holders (Commercial Fisheries Entry Commission, Juneau, personal communication), 30 or 100 percent made at least one landing in 1992. Set gillnets landed 540,703 salmon. Tables 49 through 59 detail the set gillnet catch by district, statistical area, period, catch date or statistical week.

Of the 271 salmon purse seine holders (Commercial Fisheries Entry Commission, Juneau, personal communication), 207 or 76 percent participated in the 1992 season by making at least one landing. Purse seines landed in 1992 a total of 4,965,755 salmon. Tables 60 through 98 detail the purse seine catch by district or statistical area, by period, catch date or statistical week.

The hatcheries in Prince William Sound sold 3,349,091 salmon. Tables 99 through 103 detail the hatchery sales by district and catch date.

The Cordova High School has a special use educational permit. This special use permit landed a total of 5,562 salmon summarized by gear type and catch date in Table 104.

Table 105 lists the salmon confiscated by the state; 341 salmon were confiscated for illegal fishing violations.

The ADF&G harvested 7,380 salmon for a stock composition test fishery. Table 105 details that catch by day.

Herring catches are presented in tables 107 through 119. Of the 107 purse seine sac roe permit holders (Commercial Fisheries Entry Commission, Juneau, personal communication), 104 made at least one landing in 1992. The total purse seine sac roe harvest was 16591.7 tons. The gillnet sac roe harvest was 940.6 tons and all of the 24 permit holders participated. The total pounded roe-on-kelp harvest was 242.2 tons of product produced by 127 of the 128 limited entry permit holders. The harvest of 252.3 tons of naturally produced eggs-on-kelp was achieved by 217 participants. Sixteen fishermen participated in the food-and-bait fishery in the fall of 1992, harvesting 3,640.3 tons of herring.

Beginning in 1989 harvest codes were included in fish ticket information to help specify the type of harvest. In 1992 the following harvest codes were used: 11 - traditional common property fisheries, 18 - confiscated catch, 21 - private hatchery harvest, and 42 - test fishery for a special study.

The Department altered the Copper River District's (District 212) statistical area boundaries in 1988. Before 1988 there were only three statistical areas describing the district (212-10, 212-20, and 212-30). The Department's revised six statistical areas (212-11, 212-15, 212-21, 212-25, 212-31, 212-35) are used to document inside and outside area catches within the original pre-1988 boundaries.

The Unakwik District (District 229) statistical area code was changed in 1989 to reflect consistency in district coding convention. Prior to this time it was the only district in the Prince William Sound Management Area that did not have a unique three digit district code. In 1991 one new statistical area (222-35) was created in the Northern District. This new area encompasses what previously was statistical area 224-20, and portions of 222-30 and 224-40.

When using the following tables, be aware there could be some degree of error associated with the location and catch as reported on fish tickets.

<sup>a</sup> Includes 0.5 tons of confiscated gillnet fish.

<sup>b</sup> The harvest by divers of naturally occurring herring spawn on native kelp species in Prince William Sound.

<sup>c</sup> Includes 0.4 tons of discarded kelp.

<sup>d</sup> The equivalent harvest of herring due to the removal of reproductive capacity from the population based on the assumption that the average herring spawn recovery is 10%, and 80% of the spawn on kelp harvest weight consists of eggs.

<sup>e</sup> The harvest of herring spawn—on—kelp produced in net pens or pounds.

<sup>f</sup> The equivalent harvest of herring due to stress mortality and the removal of reproductive capacity of the population based on the assumption that 12.5 tons of herring are used to produce one ton of spawn on kelp.
